Olympiz: AI-Powered EdTech & Exam Prep Platform

Author: Product Team

Date: June 2026

Status: Approved / Active

1. Executive Summary & Vision

Olympiz is an advanced, personalized AI-powered learning and exam preparation platform designed specifically for students preparing for highly competitive exams (such as JEE and NEET), along with their educators and parents. By utilizing state-of-the-art generative AI and adaptive learning engines, Olympiz closes study backlogs, automates notes generation, provides real-time interactive doubt-solving, and compiles digests for parents to facilitate seamless communication and support.

2. Target Audience

- Students (Primary Users):

Preparing for JEE, NEET, or board standards. Need fast doubt resolution, revision schedules, and practice modules.

- Educators (Facilitators):

Need class diagnostic insights, knowledge base curation tools, and streamlined student assignment logs.

- Parents (Support Network):

Require simplified digests on their child's weak areas and progress without complex educational jargon.

3. Core Product Features

* Ask AI (Doubt Solver)

Real-time, context-aware student chat interface. Resolves complex equations, explanations, and diagram-based doubts instantly, utilizing custom LLM prompts and local database contexts.

* AI Mock Tests

Adaptive Computer-Based Test (CBT) simulator targeting individual weak areas. Tracks time per question, correctness, and updates chapter proficiency scoring with predictive ranks.

* Smart AI Notes

Auto-compilation of class material, formula summaries, cheat sheets, and flashcards. Integrated with Supabase storage to sync and retrieve notes across devices.

* Daily Revision Questions

Generates 20 personalized revision questions daily targeting a student's backlog topics to enhance long-term memory retention.

* AI Session Insights (Educator Panel)

Provides auto-generated diagnosis, communication modules, and full transcripts of sessions. Uses AI engines to identify learning gaps across classes.

* Parent Insights Dashboard

A customized parent interface featuring plain-language progress updates, activity heatmaps, weak topics list, and direct educator messaging.

* Gamification & Live Tracking

Streak trackers, leaderboards, and XP points rewards system to maintain study consistency and high engagement.

4. Technical Stack & Foundation

Frontend: React.js, Vite, Vanilla CSS (fully responsive bento layouts)

Database & Sync: Supabase (PostgreSQL) for user data, test history, and note sync

AI Integration: Gemini API (Google Generative AI SDK), OpenAI API, and Groq SDK

Deployment: Netlify (CI/CD synchronized with GitHub repository)
